

ABSTRACT OF THE INVENTION

A needle assembly for an intradermal injection device, and a drug delivery device, having a needle cannula having a needle tip and a limiter surrounding the needle cannula and having a skin engaging surface, wherein the limiter is moveable from a first position in which an elongate portion of the needle cannula is exposed, to a locked second position in which the limiter is not movable from the second position to the first position and in which the needle tip extends beyond the skin engaging surface a distance of about 3 mm or less.
